### 1 Problem

Let **V** be the space of  $n \times 1$  matrices over F and let **W** be the space of  $m \times 1$  matrices over F. Let **A** be a fixed  $m \times n$  matrix over F and let T be the linear transformation from **V** into **W** defined by  $T(\mathbf{X}) = \mathbf{A}\mathbf{X}$ . Prove that T is the zero transformation if and only if **A** is the zero matrix.

### 2 Proof

If  $\mathbf{A}_{m \times n}$  is a zero transformation and  $\mathbf{X}_{n \times 1}$  is a vector, then

$$\mathbf{AX} = \mathbf{0}_{m \times 1} \tag{2.0.1}$$

Let,

$$\mathbf{A} = \begin{pmatrix} \mathbf{A_1} & \dots & \mathbf{A_j} & \dots & \mathbf{A_n} \end{pmatrix}$$
 and (2.0.2)

$$\mathbf{X_{j}} = \begin{pmatrix} x_{1} \\ \vdots \\ x_{j} \\ \vdots \\ x_{n} \end{pmatrix}, \text{ where } x_{i} = \begin{cases} 1 & \text{if } i = j \\ 0 & \text{otherwise} \end{cases}$$
 (2.0.3)

If  $A_{m\times n}$  is zero transformation, then for any vector  $X_{n\times 1}$ , AX = 0.

Consider,

$$\mathbf{AX_i} = \mathbf{0}_{m \times 1} \tag{2.0.4}$$

$$\left(\mathbf{A_1} \dots \mathbf{A_j} \dots \mathbf{A_n}\right) \begin{pmatrix} x_1 \\ \vdots \\ x_j \\ \vdots \\ x_n \end{pmatrix} = \mathbf{0}_{m \times 1}$$
 (2.0.5)

$$\implies$$
  $\mathbf{A_j} = \mathbf{0}_{m \times 1}$  for  $j = 1, 2, ...n$  (2.0.6)

$$\implies \mathbf{A} = \begin{pmatrix} \mathbf{0}_{m \times 1} & \mathbf{0}_{m \times 1} & \dots & \mathbf{0}_{m \times 1} \end{pmatrix}$$
(2.0.7)

$$\therefore \mathbf{A} = \mathbf{0}_{m \times n} \tag{2.0.8}$$

Hence **A** is zero matrix.

Let us assume  $A_{m \times n}$  is a zero matrix

$$\mathbf{A} = \mathbf{0}_{m \times n} \tag{2.0.9}$$

Then,

$$T(\mathbf{X}) = \mathbf{AX} \tag{2.0.10}$$

$$= \mathbf{0.X} \tag{2.0.11}$$

$$= \mathbf{0}_{m \times 1} , \forall \mathbf{X} \in F$$
 (2.0.12)

Hence  $T(\mathbf{X}) = \mathbf{A}\mathbf{X}$  is the zero transformation.

From (2.0.8) and (2.0.12) it is proved that T is the zero transformation if and only if **A** is the zero matrix.
